PHOTOGRAPHY INTEREST GROUP NOTES #1

* RULE OF THIRDS INFO

For your review, here is some more detailed information on one of the building blocks of composition, the Rule of Thirds.

1. A video overview of the Rule:
https://www.youtube.com/watch?v=IpEuYp4_iSg&t=117s
(Josh Cripps Rule of Thirds)

2. As a tool when you are taking photos:
To find the grid on your **iPhone**
in Settings, go to Camera, Select Grid and turn it on

On your **DSLR**: use the online manual to locate the Grid Display and turn it on so it appears in your camera viewfinder

3. **As a tool when you are post processing (editing**): Both Lightroom and Photoshop have a grid display available to help guide your cropping decisions. Check the manual to find it on your version.

* SNAPHEAL to remove unwanted objects from your photos

This photo eraser is quick to master, free, and does a very nice job. Look for the free version in Mac's App Store, but don't procrastinate. The current version is the last one, so get it while you can.

Check out this video to see it in action. Other YouTube videos will guide you through learning to use it.
