

Charlestown Amateur Radio Club

September 15, 2026 Meeting

Agenda

- Thanks to all who maintained antenna watch over the summer
- Shack computer – Updated Windows, WSJT-X, Fldigi, Flrig, JS8call, Log4OM
- Uploaded Field Day QSOs to Log4OM, LOTW, EQSL and QRZ.com
- Clubs-Groups-Organizations Expo- September 18th 11AM - 2PM – Conference Center/Cross Creek
- Name change for Ham Radio Office

Remote Access From Off Campus

Remote Access From Off Campus

- 464 QSOs during trip (includes 105 for Field Day)
- Stability of internet connection directly impacts the ability to make QSOs
- VPN required to defeat port forwarding normally required by WFView (may have impacted stability of internet connection)
- On campus access should be much better (VPN not required)

Disconnect of Antennas During Lightning Threat

Disconnect of Antennas During Lightning Threat

- When on travel, VHF/UHF antenna will be manually disconnected (reconnect if you want to use and disconnect when completed)
- Paradan Antenna Disconnect will be connected between HF antenna and HF rigs – method TBD
- Paradan Antenna Disconnect requires 13.8V and 50mA to make antenna connection
- If all rigs run off a single power supply, need a method of powering power supply remotely
